1.1#把 xch4 单独提出，对数据集按月分组，只在时间这一条维度上对数据集里的数据求平均。此时得到的 CH4_monthly 为经纬*时间的三维结构，后循环画图

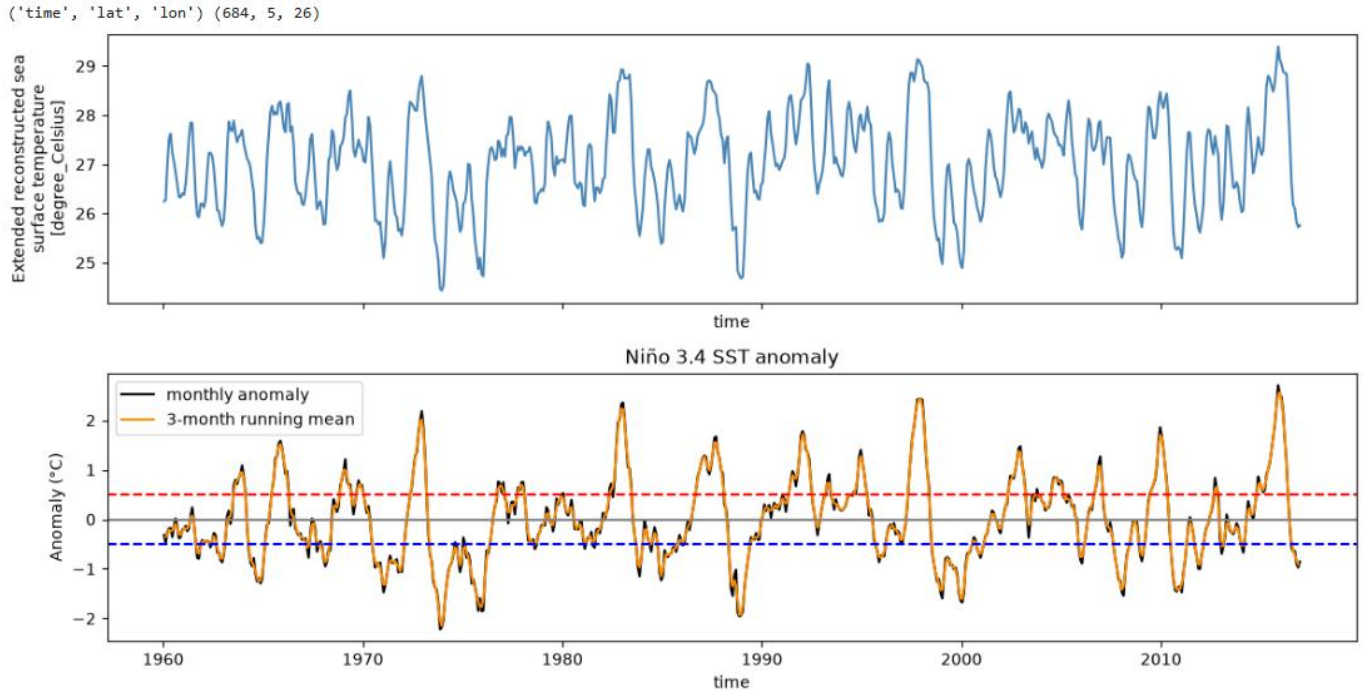

1.2 先排除无效值，再面积加权平均，最后画图

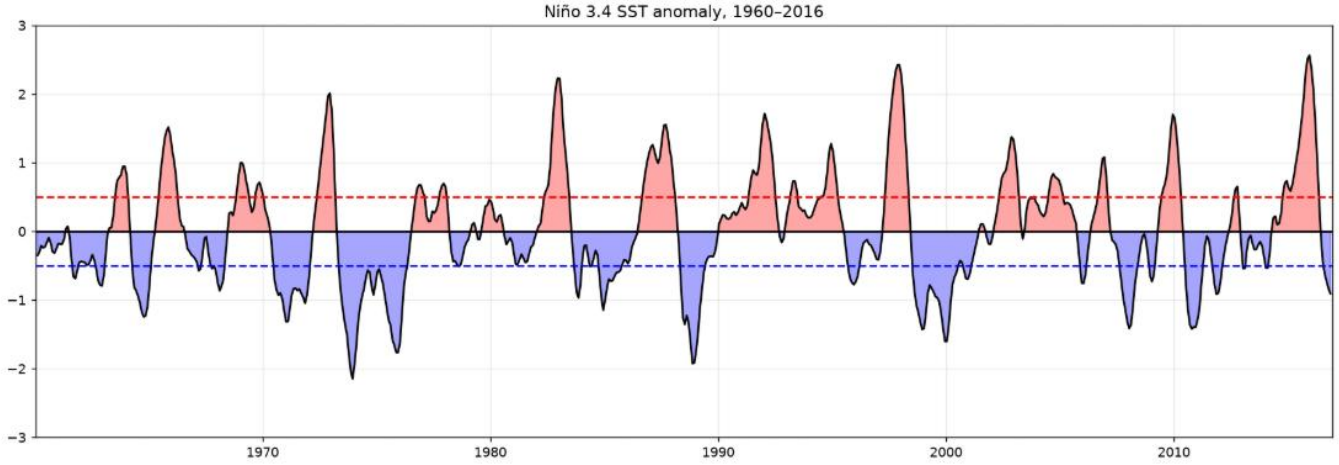

1.3 先选中特定位置的数据，再去除无效值，再距平画图

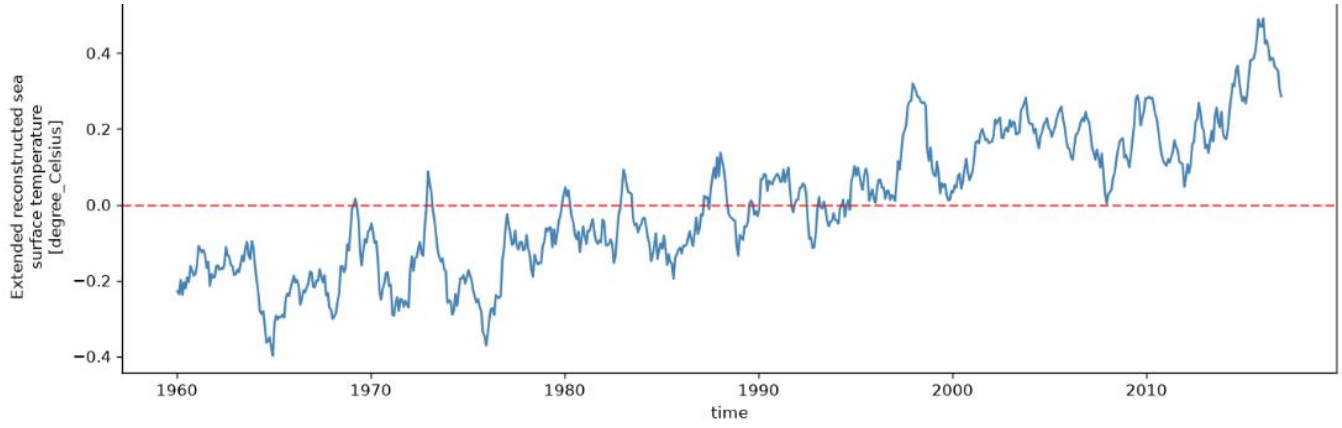

2.1 选中范围，按纬度加权平均，求平均，减去平均得异常波动值，求三个月的滑动平均，最后画图

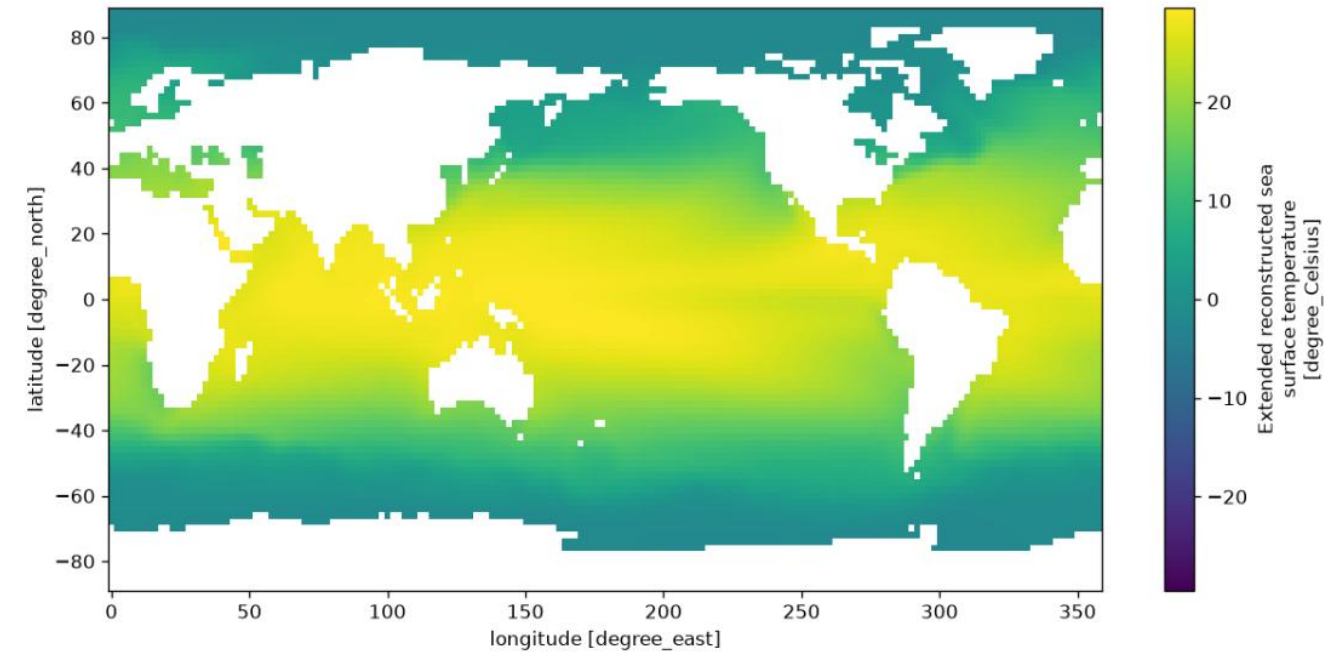

2.2 主要在 2.1 基础上加上了填色

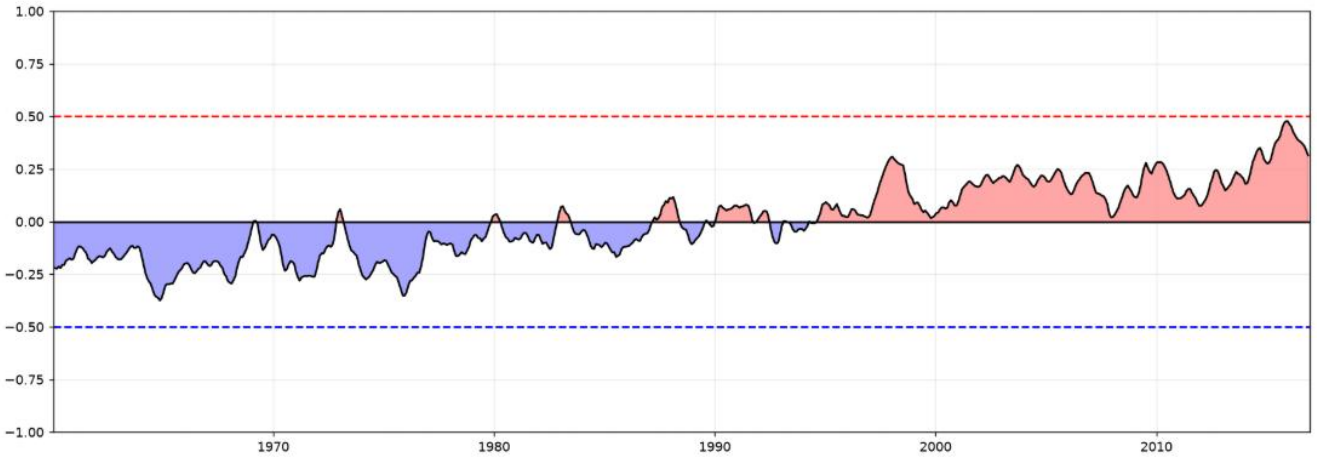

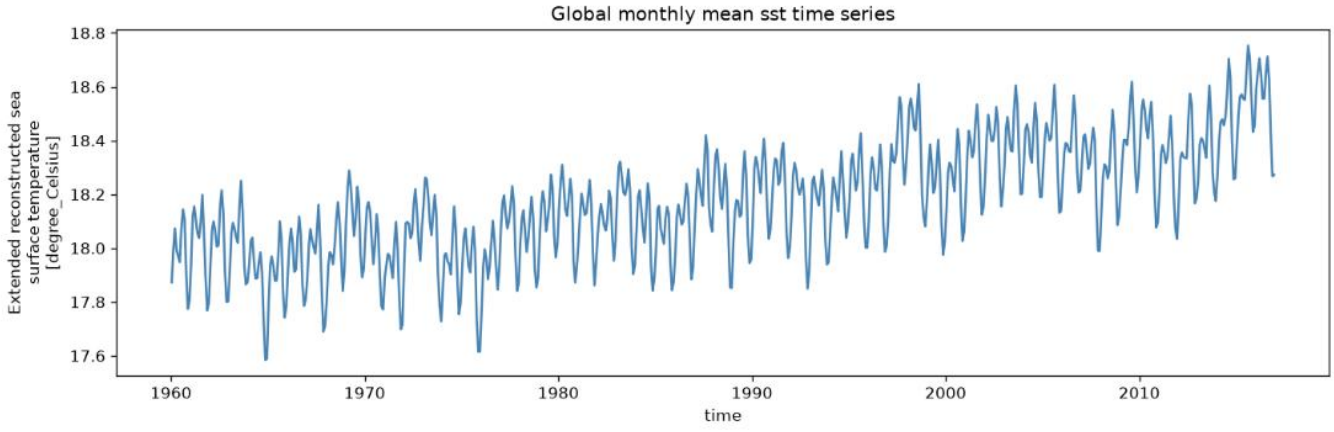

3 使用的是 NOAA 的全球海面温度数据

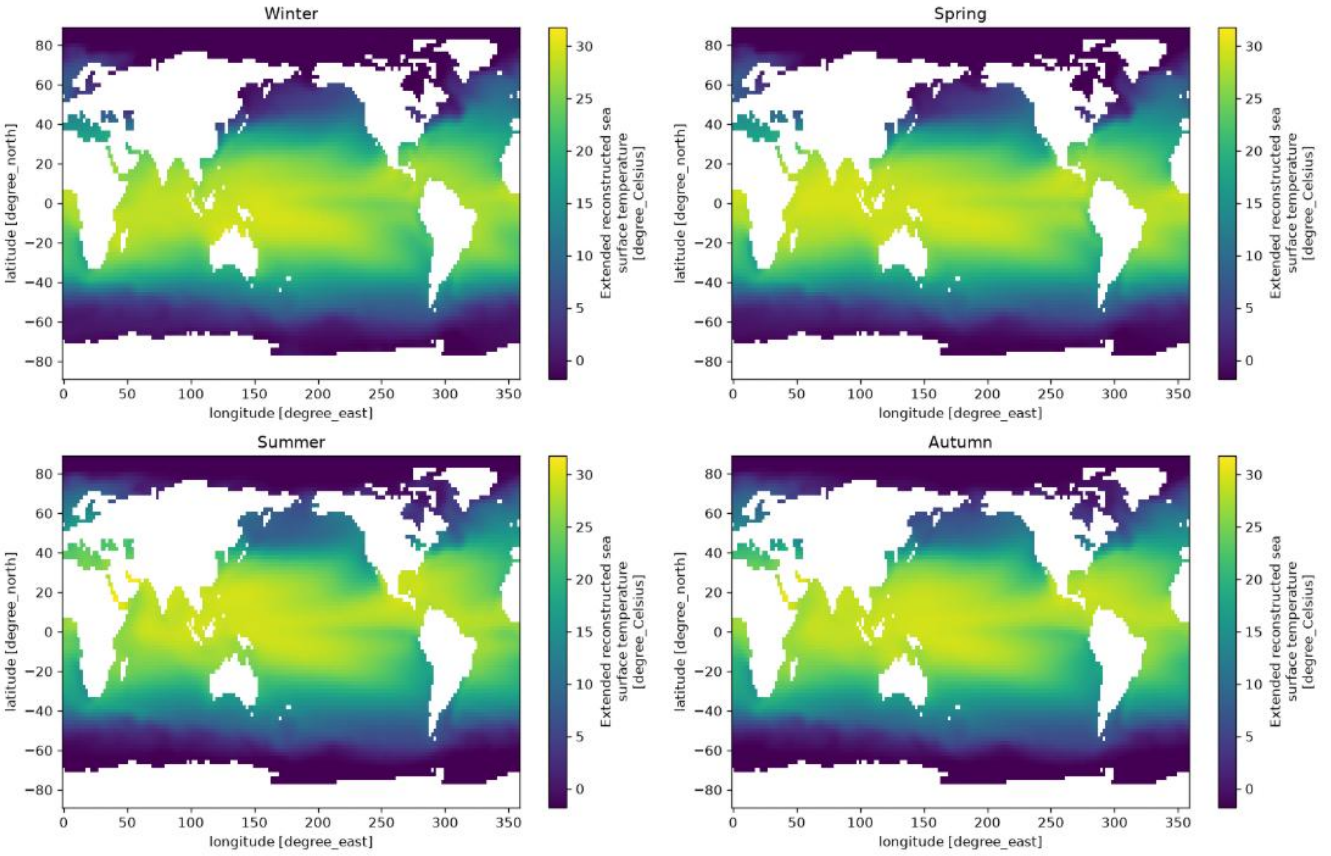

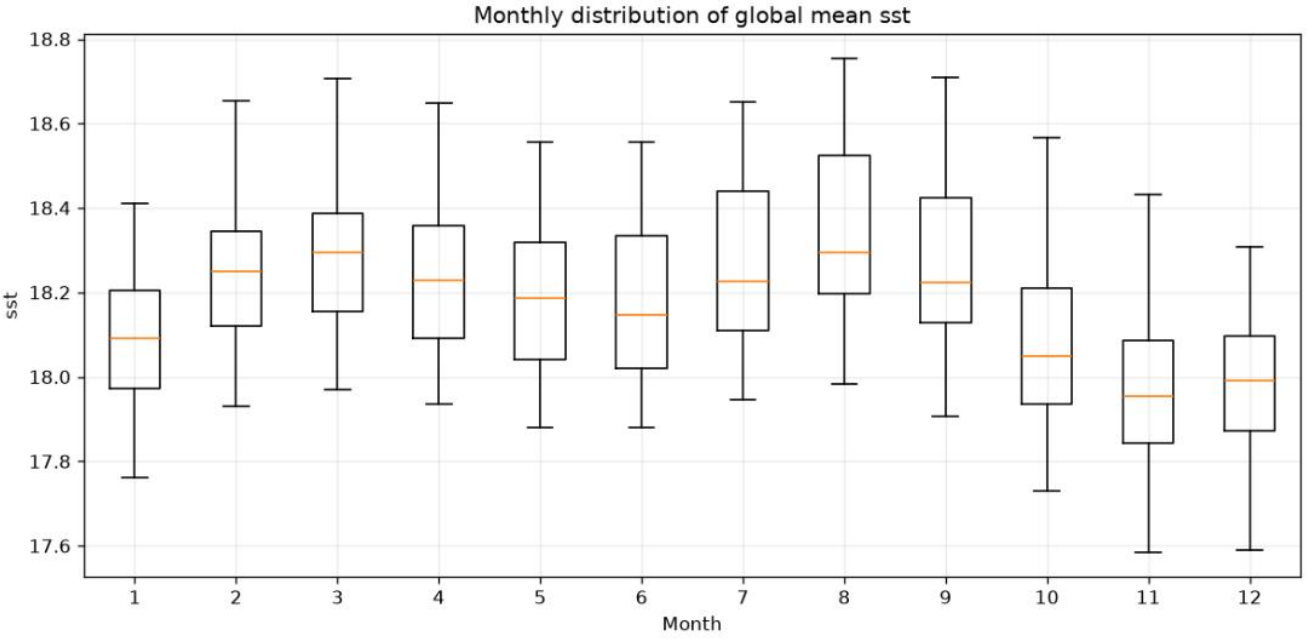

3.2 图一：全球二维
图二：距平异常
图三：全球面积加权平均值的月平均时间序列图
图四：全球四季对比
图五：十二月份箱线图
